Map of Europe showing the distribution of the 10 most common haplotypes. The map displays various colored dots and lines representing different haplotypes across the European continent. A legend on the right lists the haplotypes: H1 (green), H2 (blue), H3 (yellow), H4 (purple), H5 (orange), H6 (red), H7 (pink), H8 (brown), H9 (grey), and H10 (white). The distribution shows H1 and H2 in the north, H3 and H4 in the center, and H5 through H10 in the south and east.

Map of Europe showing the distribution of the 100 most common plant species. The map uses colored dots to represent the range of each species, with colors corresponding to the species' distribution patterns. The map shows a high density of species in the central and eastern parts of Europe, with a notable gap in the western part.

[C] OpenStreetMap contributors [C] CARRO

Map of Europe showing the distribution of OpenStreetMap contributors. Contributors are represented by colored dots, with a high concentration in Western Europe, particularly in France, Germany, and the UK. The map uses a light gray background with white lines for borders and a color-coded legend for contributor density.
